Hyperconverged Infrastructure Readiness Checklist ✓

comport
TECHNOLOGY SOLUTIONS

Want to know if your organization is ready for Hyperconverged Infrastructure? Are you evaluating a change to your current data center architecture? Follow this checklist to see if you're ready to move forward with a more agile hyperconverged solution.

- ⊘ Your data center infrastructure is nearing its end of life

- ⊘ You need to solve complex maintenance and integration issues that are getting worse

- ⊘ Your organization is already using virtualization technology

- ⊘ Your organization has a specific problem you believe hyperconverged infrastructure can alleviate

- ⊘ You need to eliminate silos and modernize your infrastructure with workload-centric design

- ⊘ You need to reduce your organization's physical footprint

- ⊘ You are trying to eliminate repetitive tasks that policy-based management may simplify

- ⊘ You are looking for a way to significantly reduce deployment time and resources

- ⊘ You are searching for ways to eliminate performance bottlenecks

- ⊘ You are interested in taking advantage of a highly available, highly redundant storage capacity pool

- ⊘ You are tired of "Vendor Finger Pointing" and hours on the phone with different support teams

- ⊘ You are looking to stay ahead of your competition by creating a more agile, responsive infrastructure

To learn more about the impact Hyperconverged Infrastructure could have on your organization, get in touch with one of our technology engineers. Find out what it takes to implement hyperconverged.
