

# Traditional Disaster Recovery vs. Disaster Recovery-as-a-Service

When evaluating disaster recovery options, you'll find there can be an overwhelming number of on-site and off-site options. Trying to determine which one fits best into your organization while being cost effective can be difficult. So, we've put together this checklist to help you choose between an on-premise DR solution, cloud based or hybrid.

Question:	On-Premise Disaster Recovery	Disaster Recovery-as-a-Service	Hybrid Disaster Recovery
Do you want to build or continue to support a replicated environment in a data center geographically diverse?	✓		✓
Are you searching for a lower maintenance solution to protect your data against cyber-security issues such as ransomware?		✓	✓
Do you need to maintain 100% control of your data without third party interference?	✓		
Do you need dynamic storage or compute resources?		✓	✓
Are you looking to perform regularly scheduled Disaster Recovery testing?	✓	✓	✓
Do you need to physically be present in the data center on a regular basis?	✓		
Are you tired of managing your replicas and server/resource utilization?		✓	
Are you looking to reduce your capital investments in the data center?		✓	✓
Are you worried about a natural disaster destroying your data or a cyber-attack within your network?		✓	
Do you need to restore in a manner of minutes versus hours or days?	✓	✓	✓

## Control and Confidence in Your Data Protection Plan
